

## The refining of petroleum abroad questions

1. General information about the oil refining industry abroad
2. Catalysts, the raw material of the alkylation process
3. Profits and drawbacks of oxygenating additives and their synthesis
4. Raw material, catalysts, conditions, and goal of the Oxypro process
5. The raw material for the Cyclar process and its destination
6. The history of the evolution of the oil refining industry abroad
7. The content of biodiesel fuel and their production methods
8. Pyrolysis. Raw material, conditions, the goal of the process
9. Raw material, catalyst, conditions, and goal of the Dimersol process.  
Types of the process and their differences
10. Catalysts, reactors of production of the liquid synthetic fuels by new methods
11. Raw material, catalysts used in the process of the catalytic isomerization
12. General Information about the alkylation process in the world and the importance of it
13. General Information about oxygenating additives
14. The importance and benefits of the Oxypro process
15. Application of the process of the oligomerization "Polynafta"
16. General Information about catalytic hydroisomerization
17. Information about biodiesel
18. The production methods of oxygenating additives
19. The goal of the coking process. Conditions, the raw material of the process
20. The importance and benefits of the "Dimersol" process
21. The goal of the catalytic hydroisomerization. Catalysts and raw material of the process
22. The goal, perspectives, conditions of the alkylation process
23. The high octane number components of fuels

24. The reactions that carried out at pyrolysis
25. Raw materials and products of the Polynafta process. The goal of the process
26. Thermal cracking of hydrocarbons. Visbrecking. The goal and raw material of the process.
27. Alcohol fuels. Their advantages and disadvantages
28. General Information about the Oxypro and Dimersol processes. The goal and raw material of the processes
29. The goal of the process "Cyclar". Catalysts and conditions of the process
30. New methods of production of the liquid synthetic fuels by Fischer and Tropch abroad
31. The goal, raw material and catalysts of the Seoforming process
32. Goal of the process Arben. Conditions and catalysts of the process
33. The goal, perspectives, and conditions of the alkyltion process
34. Information about biodiesel fuel and its advantage over diesel
35. General Information about Polynafta and Seoforming processes. The goal, raw material, and catalysts of the processes
36. General information about Arben and Cyclar processes. The goal, raw material, and catalysts of the processes
37. Alkyltion process
38. Catalytic isomersization process
39. Differences between Catalytic Isomerization and alkyltion process
40. Using of MTBE profits and drawbacks
41. Oxygenative additives
42. Importance of synthesis of unsaturated bond compounds
43. Significant unsaturated bond compounds
44. Polynafta process. Raw materials
45. Oxypro process. Raw materials
46. Dimersol process. Raw materials
47. Arben process. Raw materials

48. Cycler process. Raw materials
